

LEADING ALUMINIUM RADIATOR, INTERCOOLER AND OIL COOLER TECHNOLOGY

RADIATORS

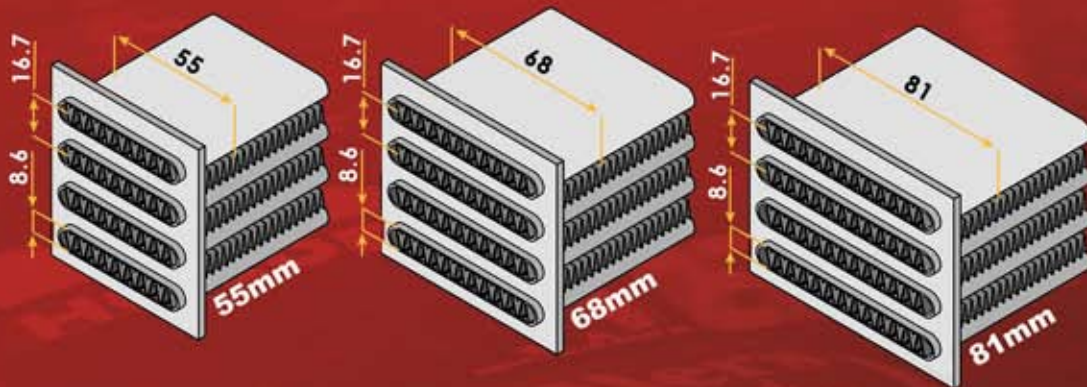

PWR are specialist manufacturers of complete direct fit units and core only Radiators, Intercoolers and Oil Coolers for street, race, drag or OEM applications, catering also to the enthusiast requiring a custom one off built unit. PWR tradesmen produce all assemblies by hand from Hi-grade Aluminium to ensure consistent quality, durability, strength and performance to meet the highest of customer expectations. R&D and race proven performance delivers the very latest in tube and fin technology to every PWR Performance Product maximising cooling efficiencies and disipation of heat.

INTERCOOLERS

- > Over 1000 OEM performance part numbers
- > Flexibility of custom designs exactly to your needs
- > State of the art controlled atmosphere brazing process
- > World Class TIG welding
- > High heat transfer & low pressure drop designs
- > High corrosion resistance
- > Revolutionary PWR designed fin pitch and louver angle
- > Unique PWR designed extruded Intercooler and Oil Cooler tubing, providing high heat transfer and low pressure drop in a one piece design with rounded leading edges for superior ambient flow.
- > PWR specialise in custom made units
- > Full time R&D department
- > 100% Australian made.

OIL COOLERS

LEADING ALUMINIUM RADIATOR, INTERCOOLER AND OIL COOLER TECHNOLOGY

PWR's Dimple radiator tubes can increase your radiators efficiency by over 10%.

PWR's in-house design introduces hundreds of small dimple restrictions which slows water flow in each tube thus creating more active flow across the tubes.

This increases the heat transfer efficiency of our core.

This itself does away the need for Multi or Triple passing of the water flow.
