

## Electronic Booster Pump Installation

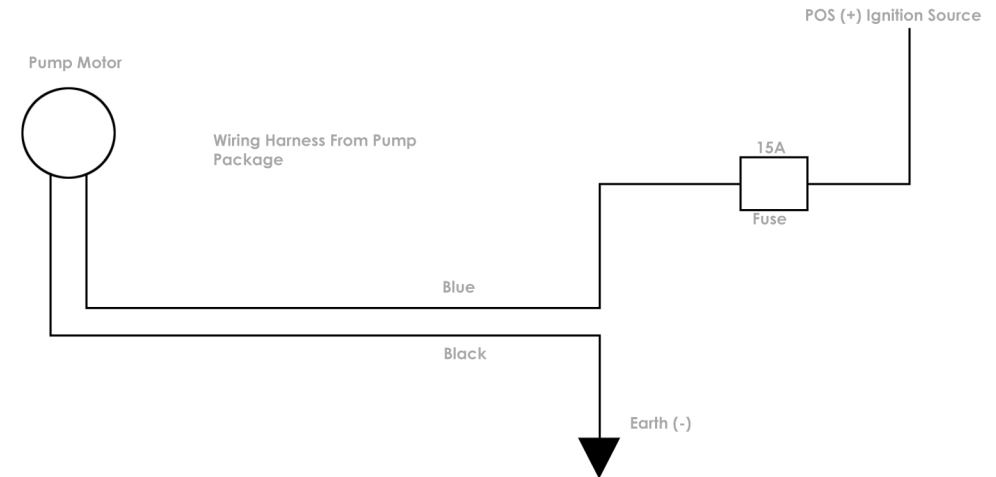

The "EBP" is used in conjunction with our "PWR" barrel cooler kits, this enables us to supply, an independent, stand alone water to air cooling system.

### NOTE:

The "In Line Filler" is positioned at the highest possible point, between the "Barrel and Radiator". The Pump is located at the lowest point between the "Radiator and Barrel"

## Wiring Diagram For Continuous Running

## Wiring of Pump

The "EBP" can be wired several ways, either for continuous operation, with a thermal switch or, with a manual over-ride switch. Above is an example of "Continuous Configuration"
